Good afternoon Charlie,

Thank you for attending our Open House and submitting the below follow-up questions. Our team has the "Questions for EPA Open House, 12/11" document prepared by the Texas Organizing Project (see attached). We are currently working on answers regarding air monitoring, soil testing, groundwater testing, surface water/runoff water testing, onsite contaminants, and future site usage. Our goal is to have a prepared response and resources for further information to you by Friday, December 19, 2014. If there are any changes to this date we will let you know.

Respectfully,

Joan Drammeh

Subject: Some follow up questions on CES

Good afternoon Gary,

Thanks again for making yourselves available to the public on Thursday to answer questions about the EPA's actions pertaining to the CES Environmental Services Site in Houston. It sounds like good progress is being made on getting liquid contaminants off the property, and hopefully this progress continues so that further remediation of the Site and surrounding areas can begin soon.

I had a few follow-up questions after speaking with you at the end of the meeting on Thursday that I didn't get to ask:

Some neighbors brought to our attention that SKA engineering was on site a while back and appeared to be digging a well. Is this an EPA monitoring well? If not, will monitoring wells be dug on and around the Site in the near future?

How many PRPs related to CES have been identified and contacted by the EPA and how

many have responded?

Several people at the meeting asked about data on the contaminants found onsite, and you had said that this data will be posted soon. Could you tell us where and when this data will be made available to the public?

You mentioned that some soil testing had been performed around the Site. Could you specify where and if the findings warrant further testing and/or remediation?

Would it be possible for the Texas Organizing Project (TOP) to send you a list of questions that the EPA can answer in writing within a couple of weeks regarding the CES Site?

Thank you for your time, Gary. I look forward to speaking with you again.
